

COMPLETE QUADRANT

The entire quadrant comprises three "sectors" divided by the predominant economic activity, as different security studies have shown that this is usually the predominant factor for native crimes in the area, making it the most operable factor.

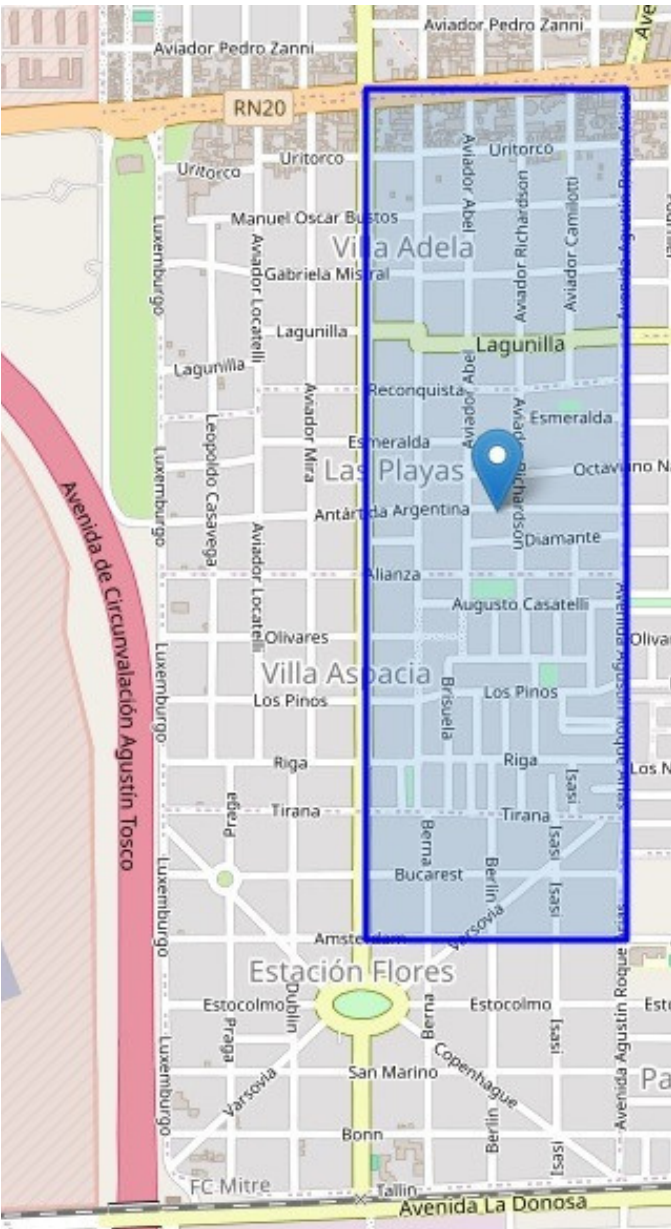

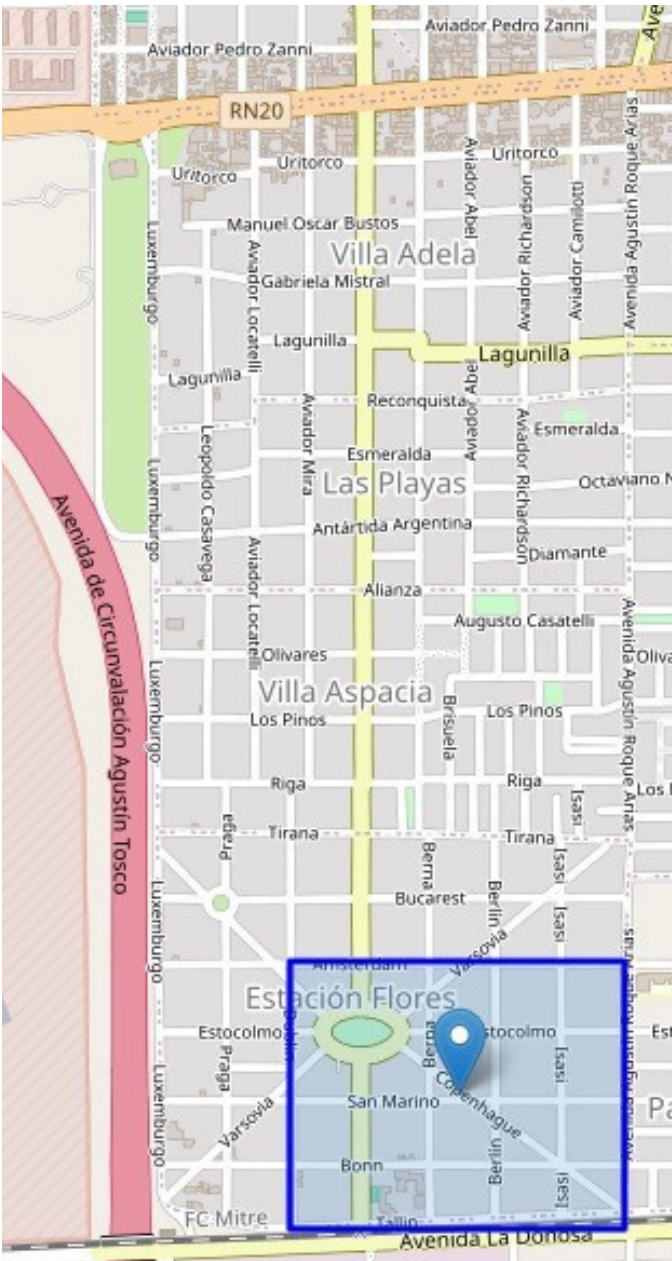

SECTOR I

Composed mainly of factories that operate during the day (approximately 06:00 AM to 06:00 PM). None of them have residential areas, so they remain unoccupied at night.

SECTOR II

Mainly a residential sector, partly consisting of an old neighborhood that existed before the current urbanization of the area, and the rest made up of "relocated neighborhoods," established in the years closest to the study.

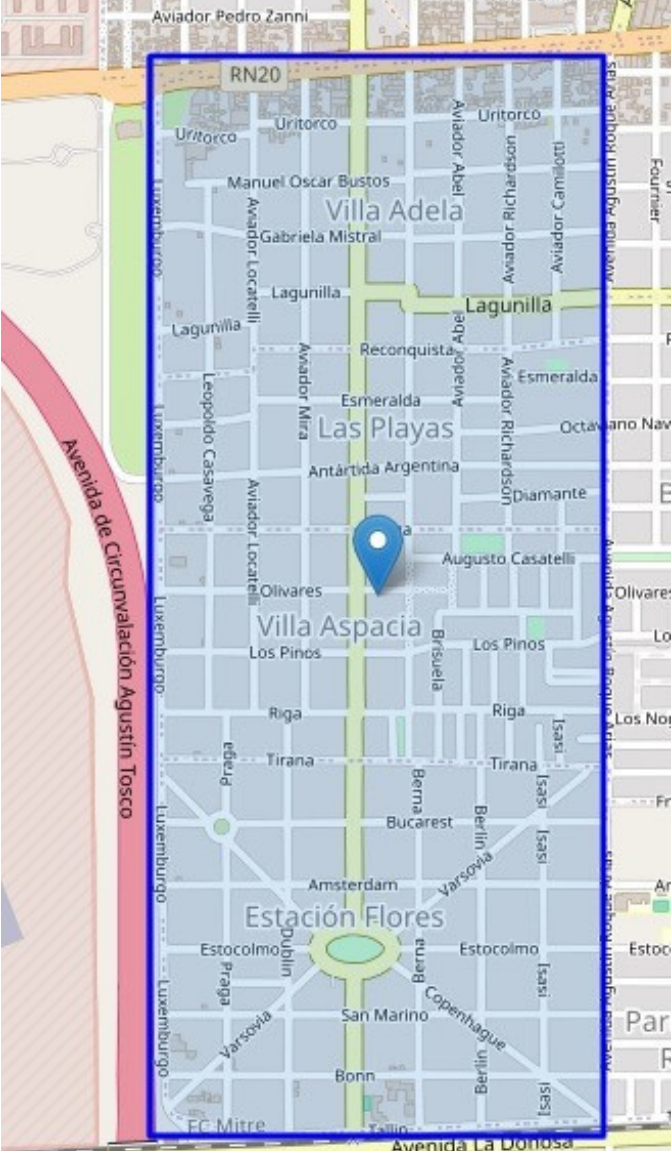

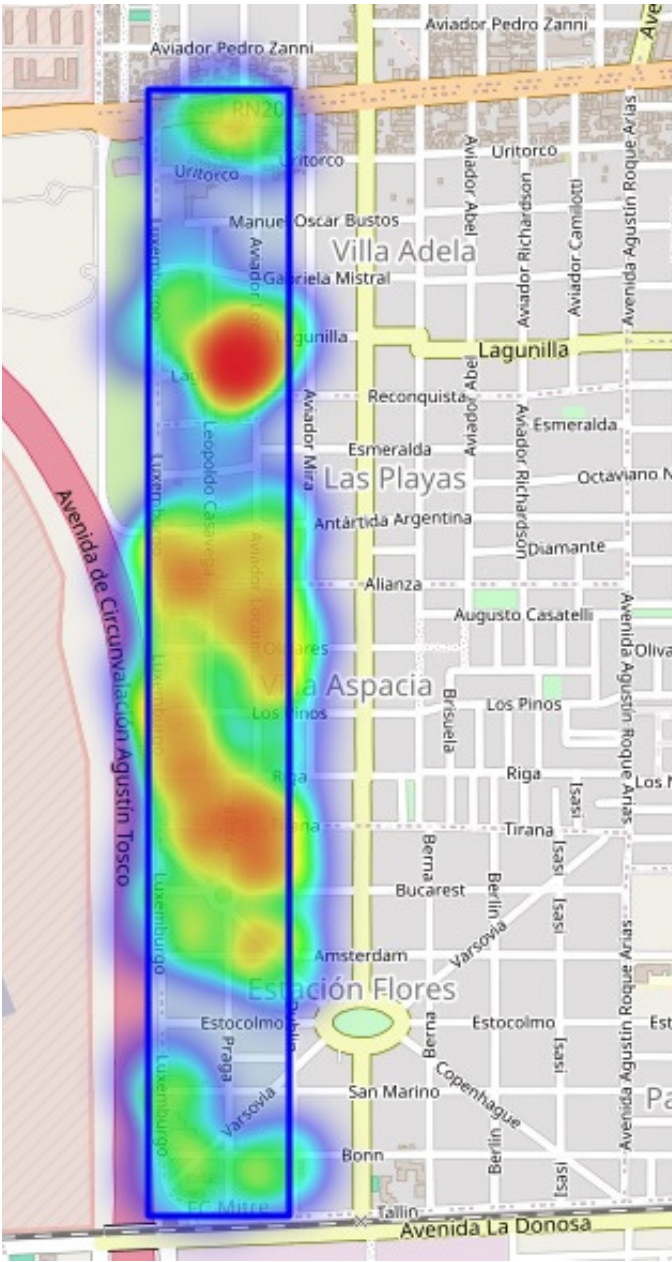

SECTOR III

Mostly composed of shops, businesses, schools, plazas, bus stops, and high-traffic areas where people do not stay, making this area also free of pedestrians and residents during nighttime hours.

COMPLETE QUADRANT AND LOCATED CRIMES

Starting from the previous divisions and the concept that economic activity "attracts" crime, we can identify the issues of each sector (using a broad time period from 01-2017 to 04-2023) to separate occasional crimes (outliers) from the inherent crimes of the area.

SECTOR I

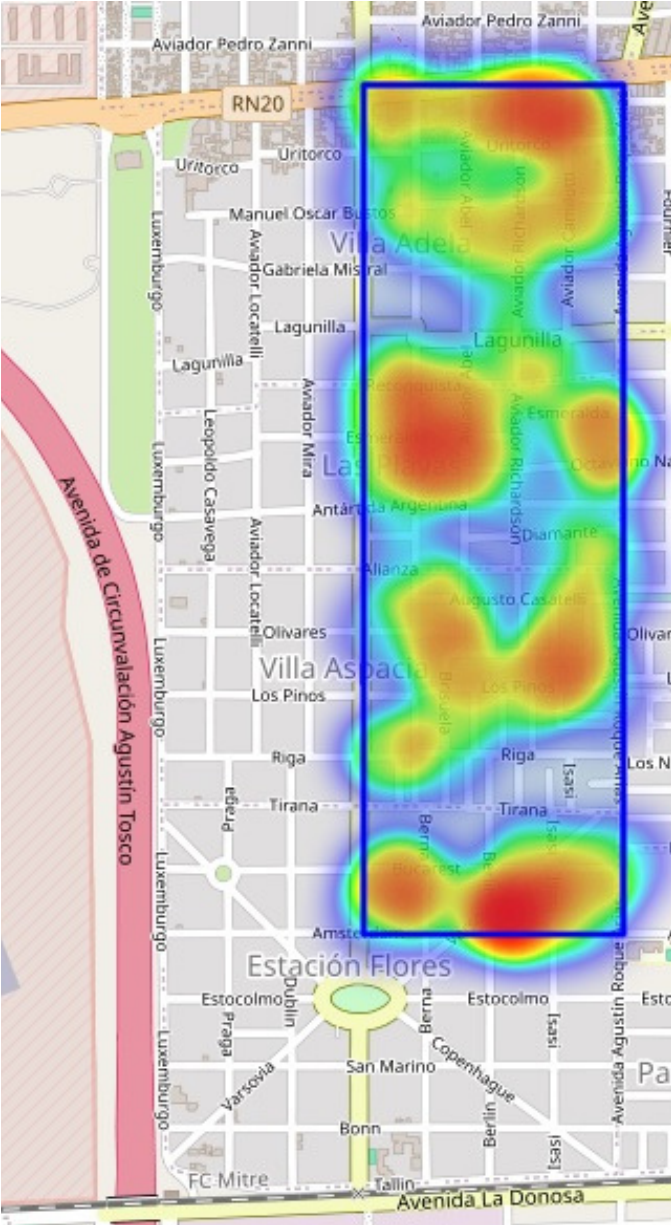

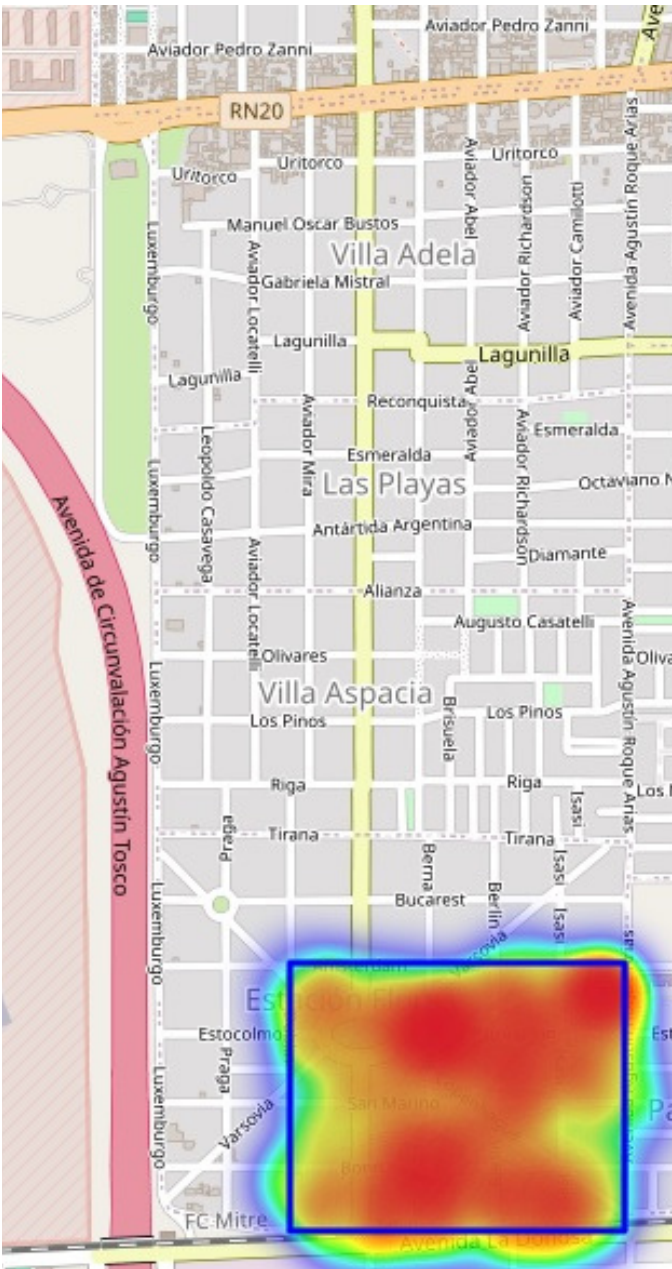

The characteristic crimes of this sector are:

- Robbery (Crimes against private property with damage to businesses/factories)
- Theft (Taking private property without damage, entering to extract private property from these establishments)
- Vandalism (Damage not affecting the structural integrity of buildings)

SECTOR II

The native crimes of this area are:

- Vehicle theft (both stationary vehicles and those entering/exiting the residence)
- Robbery (taking private property through violence)
- Minor injuries (usually accompanying conflicts between neighbors as well as robberies)
- Theft (mainly items "left unattended" in the gardens and/or yards of homes)

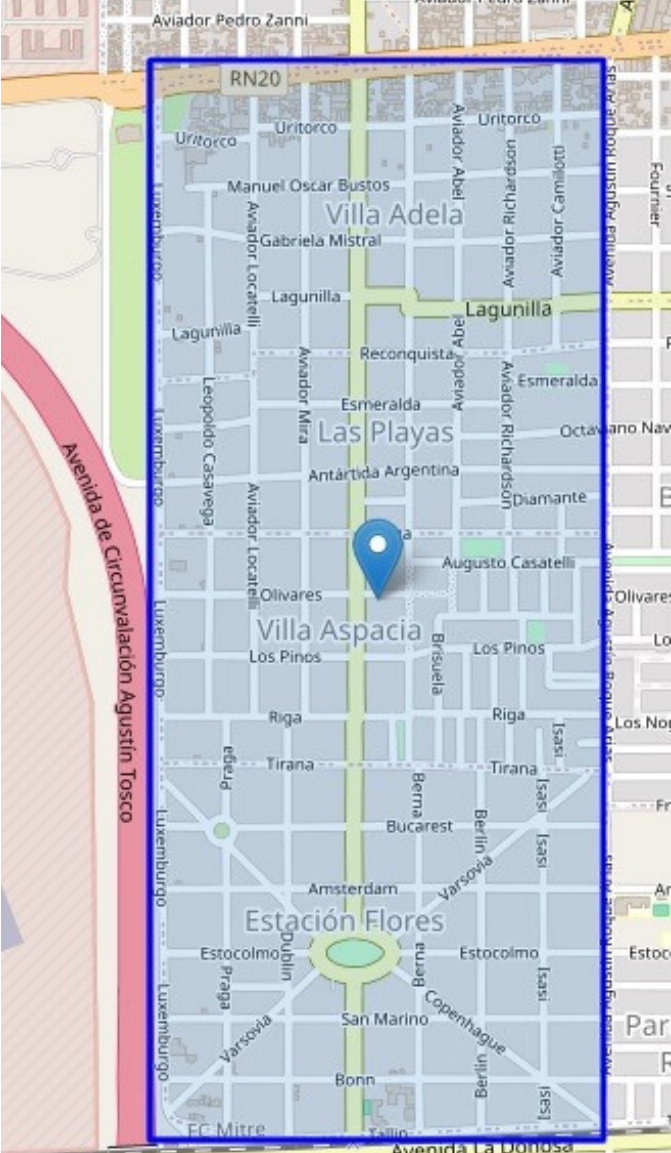

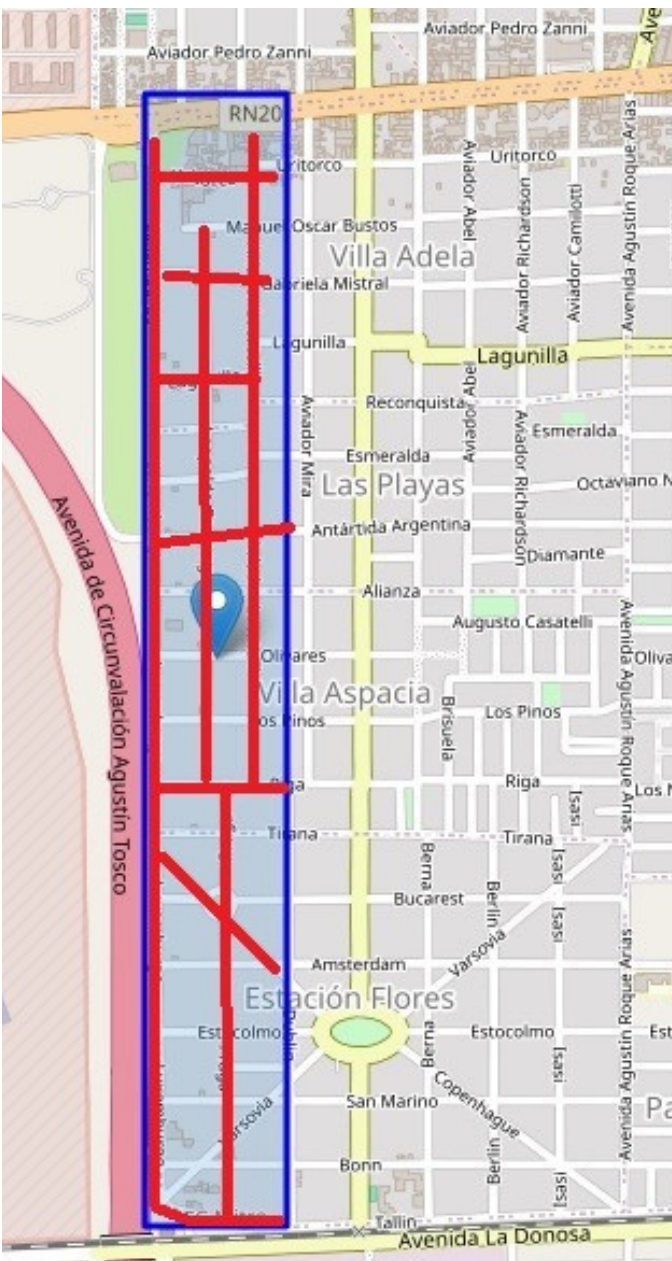

SECTOR III

The crimes that characterize this area are:

- Armed robberies (theft of private property typically involving a vehicle, using threats and violence)
- Group robberies (groups or "gangs" using violence as a group to commit theft)
- Robberies (theft of private property using violence)

DISCLAIMER

While names, dates, and other details were changed to avoid affecting ongoing real criminal investigations, the inherent characteristics of the crimes and the area were preserved (respecting its heterogeneous nature in economic activities). The applied strategies were also respected, avoiding mention of the more specific ones or those that compromise participants' privacy.

SECTOR I

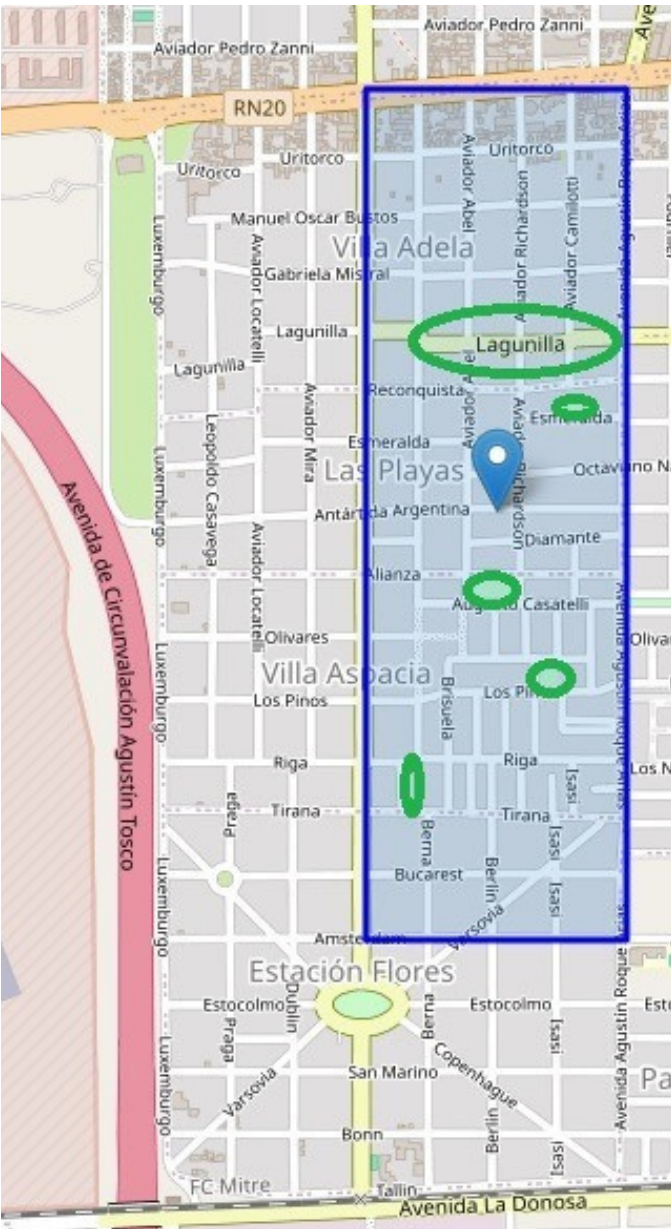

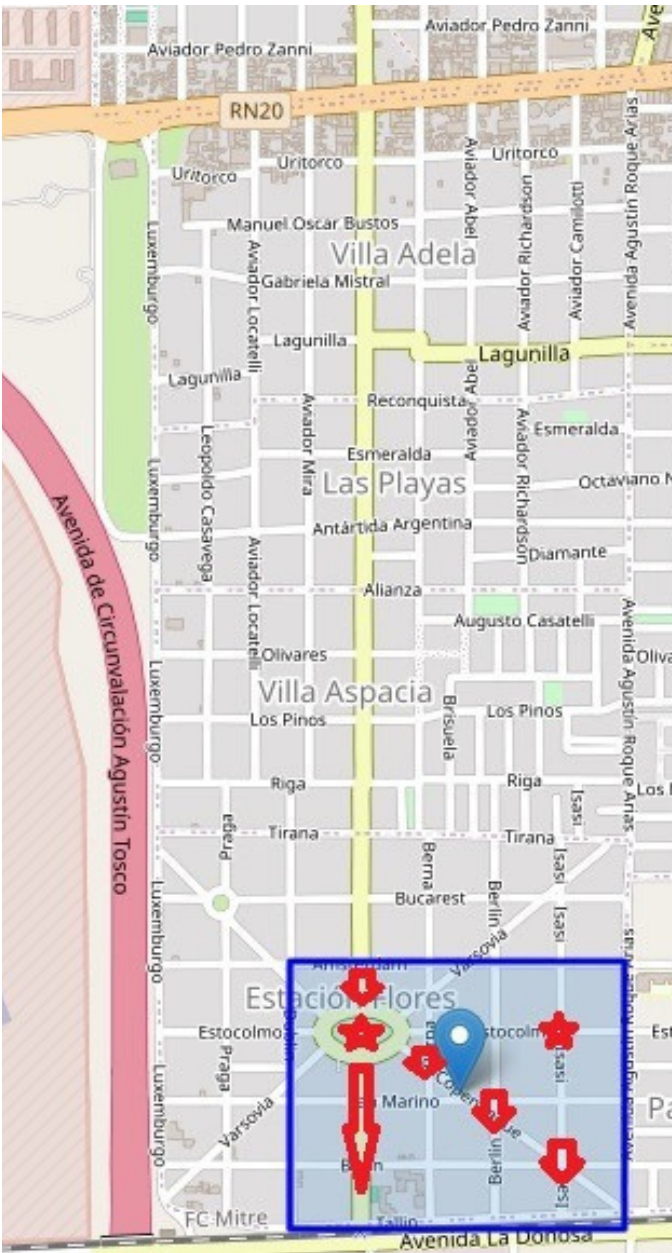

For this area, the strategy suggested includes:

- Conducting regular patrols in the area during nighttime, with patrols following random routes, varying the number of personnel and timings to make police presence unpredictable. Additionally, strategic stops (not publicly marked) support quick response times, preventing the circulation of suspicious individuals in the sector. Implementing or updating
- alarm systems to utilize intelligent mechanisms.

SECTOR II

The strategy for this area required a different approach:

- Encouraging activities among neighbors to make community members a key element in fostering interaction and socialization. This involves organizing events such as training sessions, sports events, etc., to integrate outsiders into the community.
- Raising awareness among residents about implementing a security-oriented mindset, fostering a willingness to collaborate, and improving security systems.

SECTOR III

Strategic approach for the area:

- Stationing officers at points with high pedestrian and/or vehicle concentration.
- Establishing patrol circuits that are not random, accompanying routes of large groups of pedestrians and/or vehicles (such as school entrances and exits).
- Installing public security cameras to deter the presence of violent groups.
